

Protect Your Home Computers for Free

The same cybersecurity system that monitors our businesses is available for use at home. As a Heritage Group employee, you can protect your home computers at no cost using Sophos Home Premium.

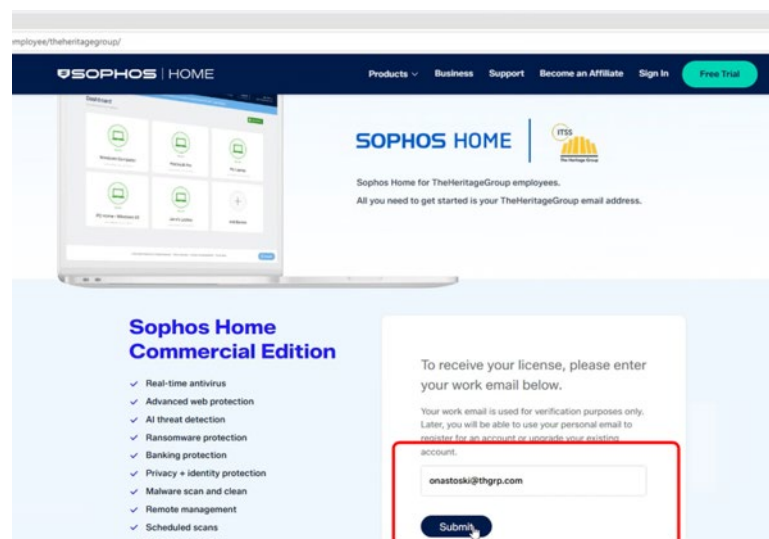

What you get

Sophos Home watches for suspicious activity around the clock and protects against viruses, malware, ransomware, phishing and dangerous websites. Your free license includes:

- **Real-time antivirus and AI threat detection** that catch threats as they happen
- **Ransomware protection** to keep your files from being locked and held for ransom
- **Web and banking protection** for safer browsing and online shopping
- **Privacy and identity protection**
- **Automatic updates and scheduled scans**, so it runs in the background
- **Protection for up to 10 computers**: your laptop, your family's desktop, your kids' school computers, and more

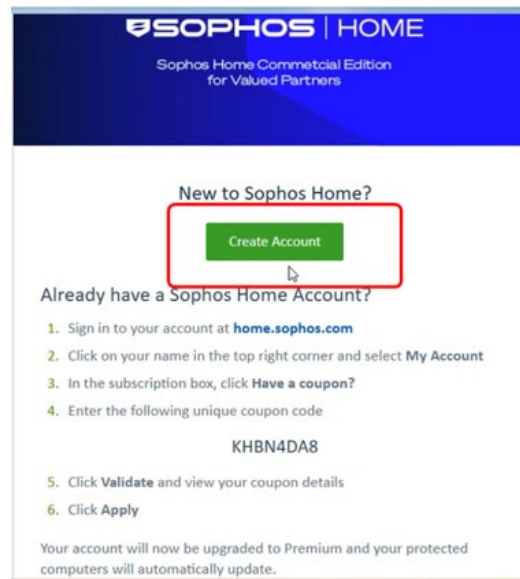

How to get protected at home

1. Go to the [THG Sophos Home page](#).
2. Enter your **company-issued email address**. A registration email will be sent to your Outlook inbox.

The screenshot shows the Sophos Home website for The Heritage Group employees. The page has a dark blue header with the Sophos Home logo and navigation links: Products, Business, Support, Become an Affiliate, Sign In, and a Free Trial button. Below the header, there's a section titled "SOPHOS HOME" with a sub-header "Sophos Home for TheHeritageGroup employees." and a note "All you need to get started is your TheHeritageGroup email address." To the left, there's a laptop displaying the Sophos Home interface. Below the laptop, there's a section titled "Sophos Home Commercial Edition" with a list of features: Real-time antivirus, Advanced web protection, AI threat detection, Ransomware protection, Banking protection, Privacy + identity protection, Malware scan and clean, Remote management, Scheduled scans, and Automatic updates. To the right of this list, there's a registration form with the text "To receive your license, please enter your work email below." and a note "Your work email is used for verification purposes only. Later, you will be able to use your personal email to register for an account or upgrade your existing account." The form has a text input field containing "onastowski@thgrp.com" and a Submit button.

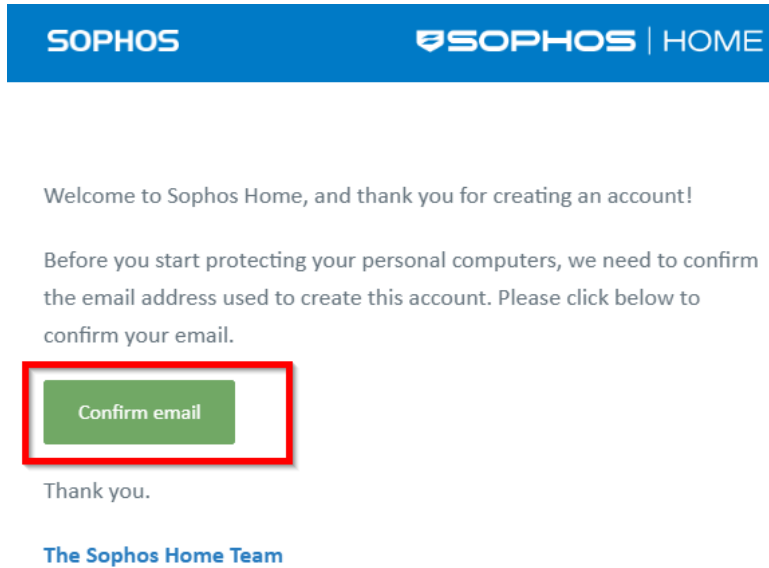

3. Click the "Create Account" button in the registration email.

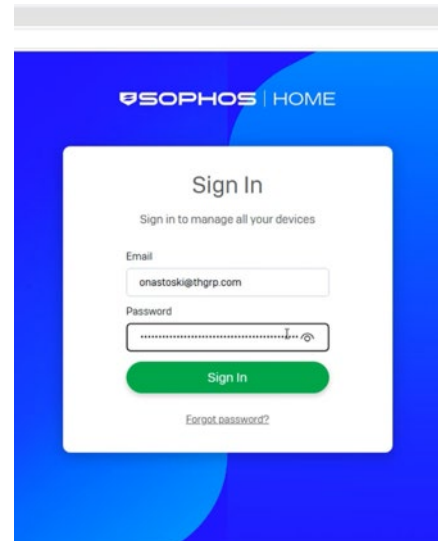

4. On the Sophos website, enter your name and **personal email address**, and create a password. The coupon code is applied automatically, making this service free to you! After this is done, click **Create Account**. A confirmation email will be sent to your personal email inbox.

A screenshot of the Sophos Home website's registration page. The top navigation bar is dark blue with links for 'Products', 'Business', 'Support', 'Become an Affiliate', 'Sign In', and a 'Free Trial' button. The main content area has a blue sidebar on the left with the heading 'Already have a Sophos Home Free account?' and a list of seven steps. The right side is a white registration form. It contains input fields for 'First Name' (Ogi), 'Last Name' (Nastoski), 'Email' (onastoski@thgrp.com), 'Password' (masked with dots), and 'Coupon Code' (KHBN4DA8). Below the password field is a 'Password Strength: Strong!' indicator with a green bar. A red box highlights the 'Create Account' button at the bottom of the form. A mouse cursor is pointing at the green bar. At the very bottom, there is a link: 'Already have a Sophos Home account? Sign in!'

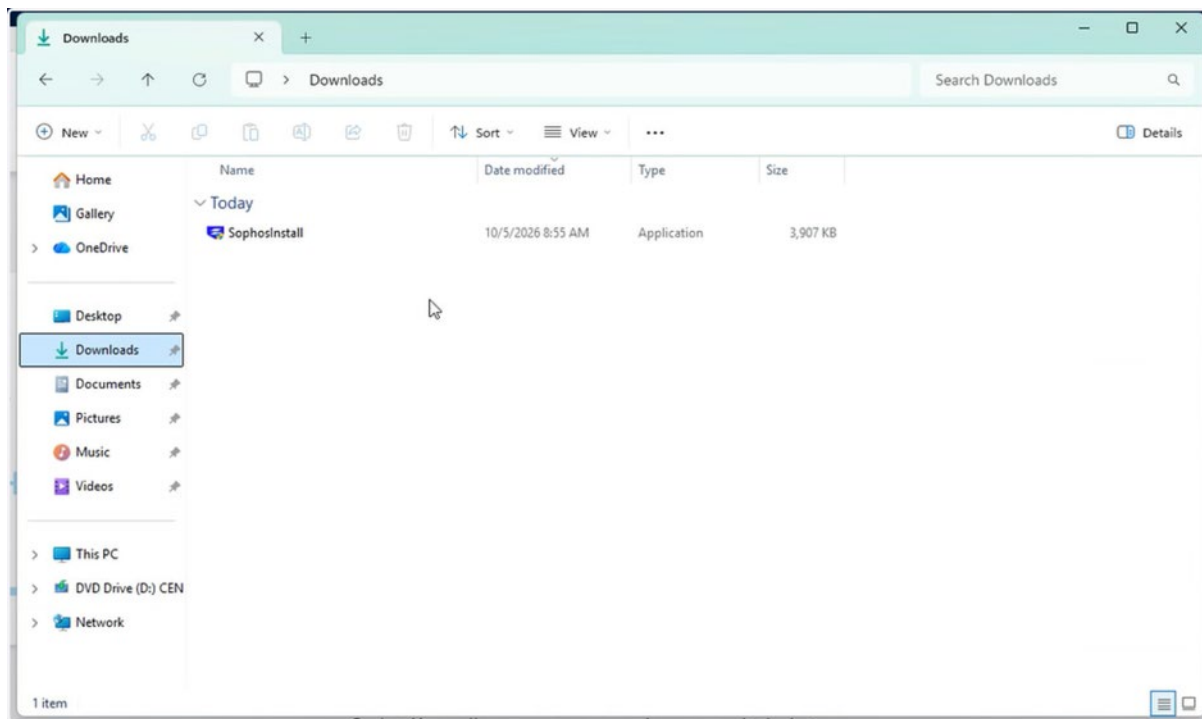

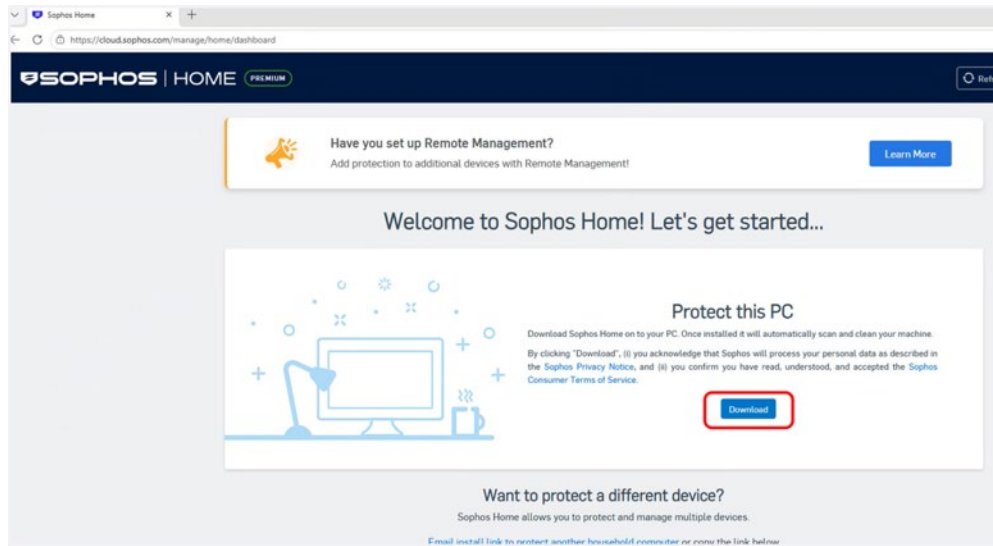

5. On your home computer, open the confirmation email and click **Confirm email** to go back to the Sophos Home site.

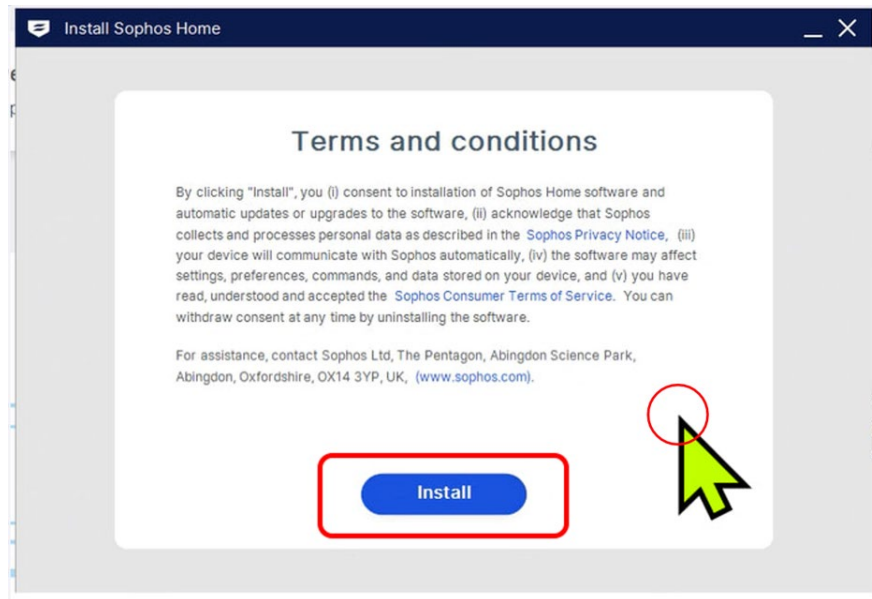

6. Sign in with the personal email and password you just created.

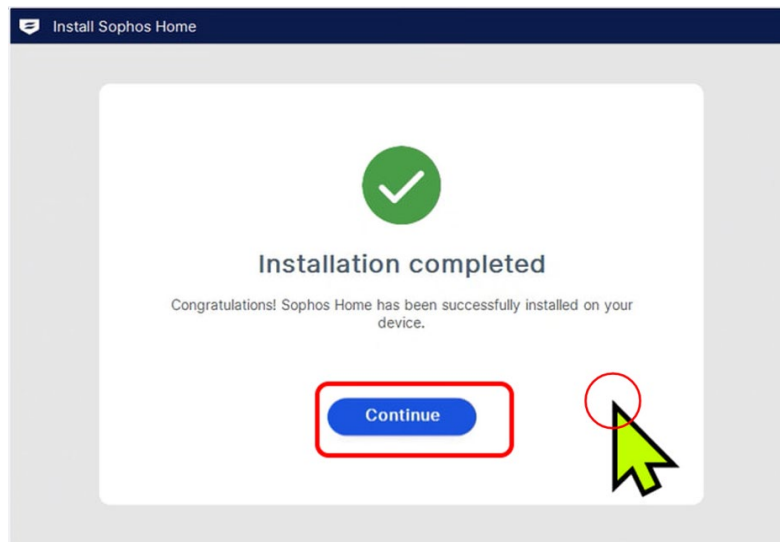

7. Download the installer (SophosInstall.exe) and run it.

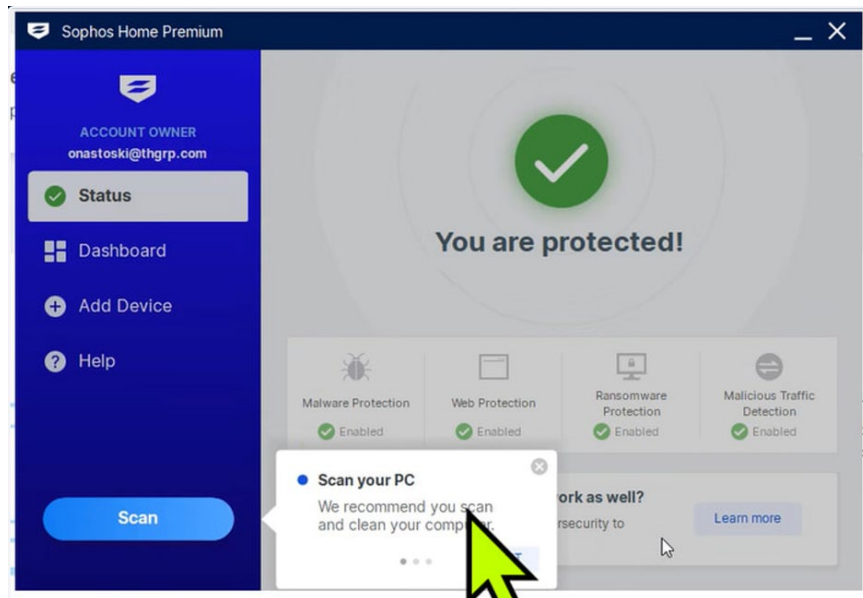

8. When the installer runs, click **Let's Start**.
9. Click **Install** after the Terms and Conditions.

10. Once installation is complete, click **Continue**.

11. Sophos Home will start after it's installed.

12. **Have more computers to protect?** Copy the install link at the bottom of the screen, email it to yourself, and open it on each additional computer, up to 10 in total.

Good to know

- If your computer already runs another antivirus program (such as Norton, McAfee, or Symantec), the installation may take a little longer because Sophos removes the other program first. Windows Defender can stay on and run alongside Sophos.
- Sophos Home is for your **personal computers only**. Your THG-issued computer is already protected, so there's no need to install it there.
