

# Sophos Home Premium

Protect your home computers from cyberattacks

The same cybersecurity system that monitors our businesses is available for use at home. As a Heritage Group employee, you can protect your home computers at no cost using Sophos Home Premium.

## What is Sophos Home Premium?

Sophos Home seeks out and analyzes suspicious behaviors and activities. Real-time, 24/7 threat intelligence ensures that your computers are protected from viruses, malware, ransomware, application and OS exploits, phishing attacks, malicious websites and the latest cybercrime.

## How to get protected at home

1. Go to the [Sophos Home website](#), which is specific to The Heritage Group employees.
2. Enter your company-provided email address. A registration email will be sent to your Outlook inbox.
3. Click on the “Create Account” button in your registration email.
4. Once on their website, register by entering your name and personal email address and creating a password. The coupon code will automatically be entered, making this service free to you! A confirmation email will be sent to your personal email inbox.
5. On your home PC, click the “Confirm email” button in the confirmation email to be taken back to the Sophos Home site.
6. Sign in using the credentials you just created: personal email and password.
7. Download Sophos Home onto your home PC. Once installed, it will automatically scan and clean your machine.
8. If you have more than one computer to protect, grab the install link at the bottom of the screen, email it to yourself and open that link on your other computers.

*If your computer is already running another protection program (e.g., Symantec, McAfee, Norton) other than Windows Defender, Sophos may take longer to install because it will first remove the other software. Windows Defender can run simultaneously with Sophos.*

Start the registration process now and have your home computers protected within the hour.
